TECHNICAL DESCRIPTION

Use

The unique HPC coating seals and protects metal surfaces at risk of corrosion that come into contact with the pumped medium.

As a self-priming swimming pool pump with integrated hair and fibre catcher, the herborner.XS-C is particularly suitable for pumping and filtering pool water, fresh water, sea water, industrial water, and other liquids contaminated by coarse particles.

Due to its particularly quiet running, it is especially suitable for private, hotel, or spa pools.

Impellers

Dynamically balanced impellers ensure vibration-free running and contribute significantly to the long service life of the pump.

Closed multi-vane impellers made of high-alloyed aluminium bronze (CuAl10Fe5Ni5) are used for clean to slightly contaminated pumped media.

Construction

Ideal material combination thanks to hybrid type of construction. Easy-to-install and readily serviceable compact design.

High circulation rates are achieved thanks to minimum space requirements and an easy-to-install and readily serviceable compact design.

Filter casing

The filter casing made of durable grey cast iron is completely coated with the unique HPC coating. This reliably protects against negative influences of the pumped medium on the material, thereby effectively extending the lifetime of the pump.

The filter strainer with a mesh specially designed for hair and fibre enables a high degree of filtration. The generous volume of the filter strainer (2,400 cm³) ensures reduced maintenance.

The self-priming function of the pump is guaranteed after the pump casing has been filled.

Motor shaft

The rigid motor shaft made from high-alloy stainless steel ensures minimal deflection.

Shaft seal

The shaft sealing on the pump side is effected in all models via a maintenance-free mechanical seal, which is independent of the direction of rotation and made from wear-resistant high-performance materials. All motors are equipped with a special seal for splash-proofing on the pump side.

TECHNICAL DESCRIPTION

By-pass channel

The mechanical seal is flushed optimally by the pumped medium through this channel. This gives the sliding surfaces the required lubricating and cooling medium thereby, extending the lifetime of the mechanical seal.

Installation

The pumps are to be used in a horizontal installation.

Noise

Noise emission is determined by complex influencing factors such as size, materials, operating and installation conditions. As early as the development stage, hydraulic measures and solid construction are used to reduce noise emission. The maximum sound pressure level is generally determined by air, magnetic and bearing noise from the drive motors. Noise levels are below the permissible limit curves specified for electrical motors as defined by DIN EN 60034-9. noise emission during operation close to Q_{optimal} (optimal efficiency) is minimal.

Output range

A complete performance range with many steep pump characteristic curves guarantees consistent pump power output, even when the filter is dirty. Even in parallel operation, they ensure a low change in delivery rate with high filter resistance and friction loss.

Speed	Q_{max} [m ³ /h]	H_{max} [m]
3,000 rpm	53.0	7.1
3,000 rpm	6.8	19.8

TECHNICAL DESCRIPTION

Motor

A medium-cooled heat exchanger motor is used. This returns a large proportion of the motor's waste heat back to the medium via an integrated cooling system through which the medium is guided.

Design	IM B5
Protection type	IP 55
Speed	3,000 rpm
Frequency	50 Hz
Connection ≤ 2.2 kW	230 Δ / 400 \blacktriangle V
Insulation class EN 60034-1	F (155 °C)

The motors are fitted with a PTC thermistor as standard.

The motor is optionally available with an external frequency converter. The use of a frequency converter is recommended, but not compulsory.

The frequency regulation of pumps is available and depends upon the operating conditions.

General data

- Pump colour RAL 5010 (standard)
- Design temperature +40 °C
- Ambient temperature range from -5 to +40 °C
- Performance verification in conformity with DIN EN ISO 9906, Class 2
- Max. density of the pumped medium 1,050 kg/m³
- Max. viscosity of the pumped medium 1.75 mm²/s

In case of deviating application conditions, the output is corrected in accordance with customer-specific requirements.

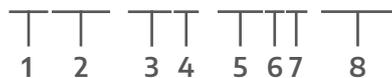

Special configurations

- Different voltage and/or mains frequency
- Different insulation class
- Heightened ambient temperature
- Higher protection type
- Enhanced tropical and moisture protection
- Special materials
- Special paint finish for all uncoated components
- Customer-specific solutions
- Permanent magnet motor with maximum levels of efficiency of up to IE5 (herborner.XS -PM)
- Asynchronous motor with energy class IE3 (herborner.XS)

Frequency converter

Frequency converters are used for the electronic regulation of motor speed which saves a significant quantity of energy. They also extend the service life of the system and reduce repair and maintenance costs.

Their main advantage is that through pump speed regulation the duty point can be adapted to the system requirements (e.g. night-time energy reduction in swimming pools), which compared to previous technical solutions and possibilities brings significant improvements for saving energy.

Frequency converters are used for installation in wall or switch cabinets (all ratings).
